**Complexed
iron**

GoGreen Plus

Extended green-up, corrects iron deficiency and improves disease resistance.

GoGreen Plus helps to regulate the release of iron over a four week period to give a sustained effect without the blackening that some irons can cause. The addition of potassium improves cell wall strength in the leaf and stem. This gives a hardening effect and improves resistance to cold temperatures.

The ability of iron to improve turf quality when Microdochium disease pressure is high has been recognised for many years. Through the results from independent trial work, Agrovista Amenity promote a range of tank mixes that both reduce the effects of Microdochium patch and improve turf quality.

Product information

Key benefits

- Complexed iron
- Improves tolerance to cold
- Surfactant for increased uptake speed
- Rapid greening

Pack size: **5 and 200 Litre**

Specific gravity: **1.27**

Application timings

Application rates

Application rate	Water rate
20 -40 l/ha	400-600l/ha

Product analysis

Analysis	% w/v
Nitrogen (N)	2.6
Potassium oxide (K ₂ O)	6.0
Iron (Fe)	6.5

Nutrient inputs

Application rate	Nutrient input (kg/ha)		
	N	P	K
Rate (L/ha)			
20	0.4	-	1.2
40	0.8	-	2.4

Approved tank-mixes

GoGreen Plus is tank mixable with a broad range of fertilisers, biostimulants and fungicides. It has also been extensively independently trialled and proven to support disease control and recovery.
