High
phosphite
foliar feed

E² PRO
phosrite

growing
through
innovation

E² Pro PhosRite is a rapidly absorbed foliar feed that provides high levels of phosphite, a nutrient known to stimulate healthy growth and support the plant's natural defences.

E² Pro PhosRite behaves in a completely different manner to conventional phosphate-containing fertilisers. It is rapidly absorbed into the plant leaves where it is translocated as phosphite within the plant cells. This stimulates strong, healthy growth and plants with a better root structure that are more able to withstand stress.

The phosphite in E² Pro PhosRite is rapidly distributed throughout the plant using both upward and downward transport systems (xylem and phloem) ensuring that all parts of the plant are quickly affected.

The use of E² Pro PhosRite can bring dramatic improvements to turf. Results from trials have shown improved turf quality and enhanced rooting.

The benefits come from the plant's improved ability to withstand stress conditions, allowing stronger, healthier grass to develop.

E² Pro PhosRite 4-37-17

Key benefits

- Promotes healthy growth
- Encourages deeper, healthier rooting
- Relieves stress
- Ideal as a tonic or as a spring starter
- Wide range of tank-mix options

Contains

4% Nitrogen
37.5% Phosphite
17.5% Potassium

Application

KEY

● Main usage period ● Extended usage period

Pack size: **10 Litre**
Application rate: **5-10 L/ha**
Water rate: **200-400 L/ha**
Specific gravity: **1.34**

Analysis	w/v %	w/w%
Total Nitrogen (N)	4.0%	3.0%
of which water soluble	4.0%	3.0%
Total Phosphate (P)	37.5%	28.0%
of which water soluble	0.0%	0.0%
Phosphite	37.5%	28.0%
Total Potassium (K)	17.5%	13%

Application rate	Nutrient input (kg/ha)			Water volume L/ha
	N	P	K	
Rate L/ha				
5	0.2	1.875	0.875	200-400
10	0.4	3.75	1.75	200-400
